

Maintenance Productivity Seminar 2006

You're invited to...

- decrease maintenance costs by at least 15%
- improve management techniques and handle difficult decisions correctly
- hire and keep quality employees
- wipe out emergency repairs and stop fighting maintenance "fires"
- 100% work-load your labor force every shift
- write effective PM sheets & create effective schedules for big projects

*experience
maintenance results*

May 3-5
Salt Lake City

Seminar Instructor

John W. Rushton
BS Mechanical Engineering
MS Engineering Management
Founder of Rushton International

John Rushton has been directing maintenance projects for the past 30 years. He has functioned as a foreman, planner, superintendent, manager and consultant, and has written articles published in *E&MJ* and *Mining Engineering*.

Mr. Rushton has worked with Fortune 100 companies worldwide, saving them 15-50% through increased productivity and decreased maintenance costs. Clients in the U.S., Chile, Canada, the Philippines, Africa, the Russian Federation of States and the Far East have utilized Mr. Rushton's expertise.

Testimonials

"This seminar is a real eye opener. Most people only give lip service to maintenance. I have used this system for years. It always makes more profits for the company."

-Bill McKinney
Mine Superintendent
North American Palladium

"The best way to improve maintenance is to use the methods taught by John Rushton in this seminar. Just go, pay attention and do it."

-John Sartori
Consultant Asset Utilization
Asset Utilization Technology Group
Rio Tinto

Seminar Outline

Day 1

PRODUCTIVITY: You only think you're getting work done! Did you know that the average maintenance worker only performs 50% of the work most people think he does? We'll show you how a planned maintenance program can increase work by 30-50%.

PEOPLE: Management must manage! Learn how to rate yourself and your employees. Learn how to take care of the motivated, get work out of the average, and motivate the unmotivated. Not addressing your people problem is costing you a fortune!

PLANNING THE LARGE PROJECT: Planning out a large project is crucial. We'll go through the steps of preparing a Critical Path Schedule, and class members will break into teams for hands-on experience.

Day 2

FINAL PROJECT: Each team will finish and present their critical path projects. We'll discuss the use of the computer as a tool in monitoring progress and tracking resources during the course of a large project.

THE MAINTENANCE DAY: What is planned maintenance? Why do it? Who's involved? What is the role of production, the planner, the supervisor and the worker? We'll discuss "the system" and then use that system to clear up some confusion in a mock maintenance day.

Day 3

THE PM PROGRAM: What is the best way to accomplish PM work? Why do it? Can you cut corners on PM work and get more production? What are the most effective intervals? We'll show you mobile and plant PM programs that really work.

PM SHEETS: Most PM sheets are hurting your program more than helping. We are paid thousands of dollars to write good PM sheets, but we'll teach you how to write your own.

FINAL GOALS AND OBJECTIVES: During the seminar you will identify goals to take home and work on. You can accomplish your maintenance goals, no matter how difficult they may seem!

RSVP today

Reserve your spot with one of the simple registration methods listed below:

Toll-free:

888-281-4466

Online registration:

www.rushtonintl.com (seminars page)

SEMINAR RATE:

\$895 per person
